

Take-off Quickly with Sierra Systems' AI-in-5-Days Challenge

Have AI Capabilities in 5 Days

Early integration of AI is more than its initial competitive advantage. Executives and employees with hands-on machine learning experience become better-prepared for this technological disruption, gaining insight into how AI's capabilities should be integrated into existing workflows for optimal results.

Evolve Your Use Case into Viable Product

Our speed, efficiency and communication drastically lowers the risks in launching your AI use case into a *minimal viable product*. With rapid execution, Sierra Systems' award-winning AI architects review your use case, help clearly define the AI "ask", and confirm the needed data is accessible and properly labeled.

Within two days, a functional model is ready for review, and the iterative process of reviewing and refining starts. This process leads to natural knowledge transfer with your in-house team.

In parallel, our change management-based methodology

prepares your organization for the change required to realize the full potential of AI. The process continues until your system is production-ready.

Proven Delivery

Sierra Systems has installed image recognition, natural language tools, and classification systems across Canada - with award-winning results and large ROIs. Learn more on the depth of AI available today by contacting your local Sierra Systems' account representative.

DAY 1 - Kick-off

- Kick-off meeting
- Review of approach
- Review use case
- Assess data
- Identify appropriate technology

DAY 2 - Initial Model

- Build data pipeline
- Transform data as required
- **Build initial model**
- Review 1st gen AI results

DAY 3 - Refine Accuracy

- Transform data as required
- Revise initial model
- Review 2nd gen AI results

DAY 4 - Refine Accuracy

- Transform data as required
- Revise initial model
- Review 3rd gen AI results

DAY 5 - Wrap-Up

- Review AI model's results
- Discuss next steps

AI Agnostic Vendor

Sierra Systems, an NTT DATA Company, is a trusted IT advisor, able to provide detailed support for all dominant AI vendors:

- Microsoft
- Oracle
