BUSINESS PROCESS INNOVATION

Management Consulting

Do you agree that a business is its process?

Do you understand your processes and your business landscape?

Whether you are looking for process improvement, benchmarking against best in class organizations, more scalable processes or a better alignment of existing processes to your value proposition, Sierra Systems' Business Process Innovation methodology can help you achieve them.

OUR SOLUTION

Sierra Systems' Management Consulting practice believes that your business is its own process. We understand that agility and flexibility are more than buzz words; they are required states for continuous achievement in a complex business environment. Many successful clients have engaged Sierra Systems to understand and optimize their processes and have achieved enhanced flexibility and agility.

With more than 10 years of experience in business process modeling and improvement, we understand the full spectrum of the business process management lifecycle. Our team aligns processes and operation infrastructures for maximum efficiency across a full span of industries and governments where we strive to deliver substantial cost savings and performance improvements.

Our consultants have extensive real world experience in businesses across a wide range of industries, they understand how to effectively deliver and meet the unique business challenges our clients present.

Value Proposition

OUR SERVICES

Our Business Process Innovation service is differentiated in several ways. Firstly, integrated thinking is applied to inspect how all of the pieces in a business infrastructure should work together as a high performing system. We understand that business is more than a collection of functional areas – it's an ecosystem. The health of this ecosystem requires an understanding of the complex interactions and interdependencies between business strategies, organizational structures and policies, work processes which include both internal and external networked participants, staff and partner competencies, as well as information technology support.

Secondly, proven performance enhancing methods and toolkits are applied to enhance and align operational infrastructure for maximum efficiency across the full span of business functions. We focus on the Value Stream flow of materials, services and information within our clients, as well as between our clients and their dynamic mix of business partners. Our Integrated Process Organization and Capture Help methodology of documenting and understanding processes ensures that our consultants fully understand and describe your business environment so that your processes can be leveraged to improve, describe, educate and regulate your business.

Outputs

Our consultants offer deep expertise with industry-leading tools such as ARIS from Software AG. This knowledge enables a more efficient business process engagement approach to be taken without the need for client investment in the tools. ARIS not only provides a modeling tool, but also tracks the relationships between Business Objects allowing extensive reporting to provide business value. Models are no longer static pictures, but comprehensive and functional representations of existing business processes, allowing an organization to deepen its understanding of its environment. By providing a single source of truth of the business architecture and structure, organizations are able to rapidly understand issues and make decisions to improve and optimize business operations.
