

Use digital evidence management to beat *Jordan*-decision timelines

72:09:48.21

Do you expect more digital evidence next year?

Can evidence management systems beat *Jordan*-decision timelines by faster sharing than you have today, while organizing high-resolution CCTVs, bodycams, drones, and in-car video and their metadata? ***Can it be made easier?***

The power of digital evidence management has arrived, with proven policies and tools to take advantage of workflow, security, and audit controls. Sierra Systems has experience bringing the pieces together, integrating the underlying products to alleviate the digital demands placed on Canada's Justice & Public Safety sector.

Can you search your digital video for a red truck? a face? a spoken name? Do your word searches scan *every paper document you have?*

- The **IBM Case Manager** simplifies repository, capturing and ingesting media. Audio files can be transcribed for easy speech-to-text searches.
- **IBM Intelligent Video Analytics** automates live feed surveillance, notifying you of identified persons or property from multiple streams day or night.
 - Once ingested, **Watson Explorer** searches everything, expanding beyond associated cases – pulling faces, people, or property.

Can you make eDisclosure better, faster, and less labour intensive?

Do more within *Jordan* timelines by safely and quickly sharing evidence.

- Simplified redaction settings for video, audio, and text improve turn-around time, while smart security roles can enforce different redaction layers for Police, Crown and Defence.
- Sierra Systems can accelerate reviews by sharing links or pointers to video within the **IBM Case Manager** repository with most Police RMS vendors.

How quickly can you access media files? Do you have audit trails for every view? Do you know when to purge?

Sierra Systems starts with workflows to automate required follow-ups and approvals with world-class security, audit trails, and records retention rules.

- **IBM Datacap** effectively captures media from the field, with smart metadata automatically filled in. **Genus Upshot Media** helps you stream media directly to smartphones in the field.

an NTT DATA Company

Accelerating IT

Sierra Systems, an NTT DATA Company, has the experience and vision to help your team integrate existing technologies and products to bring an impressive Digital Evidence Management solution to your agency.

Our 50+ years of deep expertise in targeted industries has built our reputation of delivering superior solutions that strengthen organizations' performance.
