

Early Intervention Solutions for PTSD Indicators in First Responders

Sierra Systems Can Help You Help Your First Responders

Imagine using existing data sources to constantly monitor for early indicators of risk factors in your first responders, such as potential PTSD or wellness indicators. Sierra Systems' has the tools, proven approach, and experience to bring rapid, data-driven AI-assisted EIS to life. We have the unique combination of:

- A dedicated Health industry practice delivering eHealth solutions in Canada.
- A dedicated Justice & Public Safety industry practice delivering operational and analysis solutions to police in Canada & the United States.
- Technology and innovation experts with hands-on experience building and implementing EIS solutions for several US police agencies.

Sierra Systems, an NTT DATA Company

Sierra Systems has proudly provided advanced IT solutions in Canada for over five decades. Our new parent company, NTT DATA Services, is a world leader in intelligence solutions for Health agencies.

Our proven approach includes:

- continuous predictive analytics to identify your employees whose risk indicators are higher than their cohort in similar roles by examining dozens of data elements over time periods to highlight the outliers.
- Implementing your wellness and mental health support plans using supervisor approvals and workflow, scheduling, tasking, and tracking departmental follow-up and status reporting to ensure help is provided early.

Over the past decade our staff have worked with clients to evolve EIS solutions from use of force risk monitoring, to comprehensive officer performance evaluations, and now to First Responder PTSD and wellness risks. Contact Sierra Systems today to learn more about EIS and proof-of-concept opportunities in Canada.
