Challenge

The need to share more information, with more people, in a simpler fashion is a challenge facing a broad range of industries and organizations today. Having access to a secure web based infrastructure that can be developed quickly and simply, yet afford the ability to store and share sensitive and confidential information is no longer a problem, but a need. Many of these challenges can be met and answered through the implementation of a SharePoint based solution. SharePoint portals whether they be in the cloud or on-premise provide users with an entry point to access large amounts of information, increasing knowledge sharing, productivity, and collaboration.

Our Solution

The foundation of our Microsoft SharePoint practice is based on professionals focusing solely on the SharePoint platform using both our and industry best practices. A key to our successful delivery is our SharePoint Center of Excellence (CoE). The CoE provides access to a large pool of SharePoint practitioners on an as-needed basis. This allows us to quickly assemble a team and to modify the team composition to meet the changing needs of a project. The CoE provides our clients with a critical mass of SharePoint development, administrative and support resources.

Whether moving to Office 365 and SharePoint Online, or planning your upgrade to SharePoint 2016, Sierra Systems can help. Our extensive knowledge of the platform is evidenced by numerous successful client engagements within various verticals and types of solutions across the country.

Our Industries

- Justice
- Health
- Government: Federal, Provincial, & Municipal
- Charities & associations
- Energy
- Retail

Benefits

- Connect and empower people
- Reduce costs through a unified platform
- Retrieve information quickly
- Respond promptly to business needs
- Increase reach, retention, and revenue
- Improve stakeholder engagement

Our Services

Office 365 - Our certified consultants have experience and focus on both small and large SharePoint Online design, implementation and Integration projects. We design and create intranet sites on Office 365 using industry best practices for content and document management, collaboration and governance.

Hybrid Cloud Solutions - Cloud offerings and Office 365 provide opportunity to reduce costs, securely access information anytime, anywhere, and scale the use of IT as required. For instances where workloads are kept on-premise, we will work with you to create a hybrid Office 365 and Azure strategy and roadmap that fits your organizational needs and implement hybrid solutions built on Office 365, Azure and on-premises.

Portals & Collaboration - With a comprehensive suite of tools and functionality, easily create, share, publish and manage information and documents across your organization. Our extensive knowledge can help your organization create personalized Portal, Intranets, Extranets and Social Communities to meet your organizational requirements.

Enterprise Content and Document Management - Transform information into assets by preserving, securing and delivering intellectual property across the enterprise. Working side by side with your team, our consultants help to clearly define your organizational taxonomy, information architecture, business process transformation and change management requirements regardless of the size or complexity of your solution.

Business Intelligence Integration - Microsoft SharePoint is the de-facto presentation layer for the Microsoft Business Intelligence (BI) stack including Power BI, Self Service BI, Dashboards and Reporting tools. Our SharePoint consultants utilize industry best practices to deliver meaningful BI services intent on addressing the analytic needs of your organization.

Custom Solution Development - SharePoint serves as a comprehensive development platform in creating collaborative business solutions to rapidly respond to business needs. These services are typically incorporated within the other areas of concentration with custom development for Search, Integration, Business Process Improvement, Workflows, Forms and mobile devices.

Upgrades and Migration - Sierra Systems has extensive experience performing upgrades and content migrations using native SharePoint technology and third party migration tools.

Governance - Implementation of an effective governance plan is critical to the success of any SharePoint deployment. The Sierra Systems team develops comprehensive strategies for the long-term governance of the SharePoint platform, both for on-premise and SharePoint Online (Office 365).

Training - Our highly skilled professional trainers design, develop and deliver several types of training including self-directed web-based training; web based conferencing training, hands-on instructor-led training and presentation type training, or customized blends.

Managed Services - Working closely with your team, Sierra Systems assures proper governance and accountability for your SharePoint platform by identifying opportunities to reduce costs, increase productivity and streamline operations. These services include infrastructure management, second- and third- tier application support, and team augmentation.
