SOLUTION BRIEF

MOBILE ENTERPRISE APPLICATIONS

Our Industries
Government
Justice and Public Safety
Health
Energy
Commercial

The workforce of today is more mobile than ever before and has a high expectation that enterprise applications will be available to them wherever they may be.

CHALLENGE

Smartphones and tablets now outsell traditional computers and analysts predict they will also be the most popular way to connect to the Internet by 2015. This has created a demand for existing enterprise systems to provide greater levels of access to users of mobile touch-based devices.

The growing adoption of mobile technologies is forcing organizations to change the way they interact with their key stakeholders, both their employees and clients. This change is creating new opportunities, as well as risks, that if managed correctly can provide positive impacts on these relationships.

Two questions stand: what new opportunities can be realized by embracing this new technology? What strategies should be used to capture these opportunities?

OUR SOLUTION

At Sierra Systems, we've been helping customers implement and navigate changes in business and technology for over 45 years. We continue this commitment by providing a full suite of specialist mobile technology adoption services, such as:

Management Consulting

- Strategic Planning around the adoption of mobile technologies into your organization.
- Change Management for the policy impact of bringing personal devices into the corporate environment.

Systems Integration

- Project Management methods and best practice's built around the Project Management Body of Knowledge (PM-BOK), Agile, Scrum, and Sierra's SWIM methodology.

- Technology Architecture to help navigate through the changing mobility landscape and ensure your chosen solution matches business requirements.
- Package selection and implementation of mobile device management (MDM) systems and mobile enterprise application platforms (MEAP).
- Integration Services for mobile and touch-interface devices with your enterprise, including technical architecture and user experience design to adapt existing web applications onto smartphone and tablet interfaces that will maximize user engagement and improve productivity.
- Implementation of enterprise mobile web applications on a variety of platforms, including native iOS (iPhone, iPad) applications, native Android applications, and cross platform applications.
- Evaluation and implementation of hybrid-native tool chains and emulators.

Managed Services

- Business process improvement of operational activities supporting mobile workforces, including security reviews and efficiency evaluations.
- Alignment of mobile operational activities with ITIL and Sierra SMART Methodology™.

Two characteristics that define the world of mobile devices are the multitude of available platforms and their fast pace of change. This pace of change demands that any mobile enterprise solution be agile and quick to react to new requirements and environmental conditions. Sierra's depth of knowledge encompasses these elements and can be put to highly effective use within any organization.
