YOUR MOVE TO THE ORACLE CLOUD

Our Professionals

Our Oracle professional teams are comprised of seasoned consultants, advisors and IT strategists who have a distinguished track record in strategy, process improvement, quality assurance, business transformation, implementation, change management, training, managed services, and project management.

ORACLE® Platinum Partner

LAUNCHING YOUR ORACLE CLOUD

According to a survey by the Oracle Application User Group (OAUG), 84% of respondents who are Oracle users want more information about which particular Cloud solution is right for them, and how Oracle Cloud can coexist with their on-premise deployments. Organizations are looking for information to understand what Cloud means, the available options, and how to take the next step. We can help you navigate the different paths that will ultimately lead you to your destination.

OUR SERVICES

There are various definitions of Cloud, and everyone has their own interpretation. Sierra Systems can provide you with answers to your questions, and is uniquely positioned to help you understand how the Cloud affects both your technology and organization. Our **Oracle Cloud Assessment program** is built on three distinct activities that can be engaged individually or as a series, depending on where your organization is on your Cloud journey.

First, we bring clarity on what "the Cloud" means to you and what options are available in the market. The second activity is to gain an understanding of your current application landscape, business priorities, and business capabilities to define a recommended roadmap to move to the Cloud. Third, we work with you on a deeper dive into Oracle Cloud solutions to define scope, project staffing, and budget requirements to help you take the first step.

MAKE SENSE

Education on definitions of cloud, options available, and impacts on projects, business operations and technologies.

MAKE CHOICES

Develop a roadmap aligned with your business priorities and business capability map.

MOVE FORWARD

Dive into Oracle Cloud solutions to define scope, staffing, and budget requirements to take the first step.

MAKE SENSE

Workshop Questions

What applications or tools are used today to support the business of Human Capital Management (HCM) and Finance for your organization? Does your organization have an overall Cloud strategy that encompasses HR and Finance? Is there an understanding of SaaS, PaaS, IaaS, and how they could be leveraged in your organization? What standards or tools are used to manage integrations and security today? Are your staff and business clients prepared for the rapid cycle of change that Cloud introduces?

- Education on terms and options available in the market
- Discussion on security, integration and conversion tools, differences in implementation
- Better understanding of what Cloud means for HCM and Finance

MAKE CHOICES

Workshop Questions

What is your current HCM and Finance application landscape? What are your business priorities and pain points? What are your business capabilities today in each business area (below average / average / above average / leading)? What is the vision of where you want business capabilities to be for each business area? Are your goals aligned with your future business needs?

- A clear understanding of your organization's business priorities for Cloud applications
- Business capability map and summary that clarifies where you want to be
- Development of a roadmap aligned with your business needs

Timeline for Cloud Assessment

Make Sense
One half day

Move Forward
2 - 4 weeks

Make Choices
1 - 2 weeks

MOVE FORWARD

Workshop Questions

What are the scope parameters for what is being implemented? Are there constraints or dependencies that should be considered during planning? What timeline and staffing plan is needed to deliver the project? What does the governance structure look like that is needed to execute an agile and accelerated timeline? How will change management and user adoption be addressed by the project? What impact will cloud have on your sustainment structure and process?

- Detailed discussion of "in scope" Oracle Cloud applications and which ones will meet your business needs
- Identification of integration, conversion requirements, and the complexity of general business rules
- Definition of governance and change management strategy
- Scope Statement and a high-level plan to implement Oracle Cloud
