

How Efficiently Are You Managing Your PeopleSoft Updates?

Optimize your PeopleSoft Application investment with PUM-as-a-Service

Lowering maintenance overhead is a top priority for Oracle. Starting with PeopleSoft 9.2 applications, Oracle has rolled out a new way to manage improvements and changes using PeopleSoft Update Manager (PUM).

With PUM, major application upgrades are no longer needed to take advantage of new features and enhancements. PeopleSoft bug fixes, patches, enhancements, new functional features, as well as legislative and regulatory updates are released on a continual basis, based on predefined schedule throughout the year.

Despite the benefits, many organizations using PeopleSoft 9.2 have trouble staying current with PUM updates.

Introducing PUM-as-a Service

Sierra Systems, an NTT DATA Company, can provide comprehensive support and experience handling regular, integrated releases to help you stay current.

PUM-as-a-Service was developed to help customers realize the benefits of their PeopleSoft investment, leveraging our years of experience and success on PeopleSoft projects, to:

- reduce overhead by spending less time reviewing updates in relation to your environment's needs
- have direct access to optional features and functionality in PeopleSoft 9.2 applications
- improve risk mitigation by have direct paths security updates
- implement Oracle patches faster

Benefits of PUM-as-a-Service

- **Comprehensive**
