

SHAREPOINT INTRANET SOLUTION ACCELERATOR (SISA)

SISA REVITALIZES YOUR DIGITAL WORKPLACE

Microsoft SharePoint is a strategic investment for many organizations in the digital workplace. For most, the primary goal of that investment is effective collaboration and document management, yet companies are still expected to meet the unique needs of each user, including clients, staff, and the public. As departments divide content between their sites, redundancies appear, creating inconsistent user experiences, hard-to-find information, and increasing data content volume.

MODERNIZING YOUR SHAREPOINT

Sierra Systems' *SharePoint Intranet Solution Accelerator (SISA)* transforms Microsoft SharePoint into a powerful application that can be swiftly deployed with pre-built tools and templates seamlessly integrating new features in innovative ways to drive better adoption. These tools include: pre-set governance and content management, innovative ready-to-use responsive design frameworks and webpage templates, powerful content search, Web Parts with customizable corporate styles, and content roll-up pages. SISA rapidly organizes intranet content while providing each department with the same ready-to-use templates, Web Parts with customizable corporate styles, and modern web tools. SISA's Microsoft platform allows cross-device availability, connecting portal updates to Office 365, and third-party applications.

Give departments tools to re-invent the information architecture without creating new silos.

FUNCTIONAL TOOLS

It is a common reality that most SharePoint features are under utilized. The digital workplace must cater to the personal needs of each user, or become redundant digital clutter. SISA customizations let departments (e.g. sales, marketing, finance, human resources), teams, or even individuals build the portal they need. After selecting the tools and data feeds, SISA enhances communication and sharing with modern social media functionality to encourage adoption.

By providing easy-to-use functional tools with production-ready governance, Sierra Systems' SISA allows users and employees to select the content, tools, Web Parts, and libraries for their needs, without the advanced UX design costs.

Team and Collaboration Sites

Real-time team updates provide insight into productivity and activity

Events

Set alerts to highlight upcoming company events

Social Feeds

Globally connect to staff and interest groups

Announcements

Connect with users on a personal level with news and polls

Project Milestones

Respond promptly to business needs on time

Job Postings

Receive information on internal opportunities

GET STARTED TODAY

Connect your needs to SharePoint's functionality

Based on cumulative experience from developing numerous SharePoint-based intranet solutions, Sierra Systems has developed best practices to help get you started quickly.

We provide your team with copies of our focused Workbooks. These outline the SharePoint features you and your team will need to contribute to the requirement gathering and design workshops.

SISA Workbooks

- Intranet Onboarding
- Intranet and Extranet
- Enterprise Search
- Branding
- Security

- Department and Team Site Workbook
- Workflow Management and Business Process
- Technical Design
- Document Management

- Governance
- Guide to Change Management

Developed from years of SharePoint implementation projects, our Workbooks cover key topics, showing staff new functions, and accelerating the Discovery Phase.

We can help you on your path to a greater digital experience by eliminating business redundancies, enhancing collaboration with teams, and maximizing your SharePoint investment. Our long-standing and well-established SharePoint practice has been providing services to a broad range of industries, and we leverage this experience to help our clients rapidly realize the benefits of SharePoint.
